**The Sof-Flo™ Atraumatic Coronary Artery Shunt**

**With Ultra-Soft Beveled Tip Minimizes Trauma**

The Chase Medical Sof-Flo Atraumatic Coronary Artery Shunts are the state of the art in arterial shunts. The soft beveled tip with off-set geometry minimizes trauma and facilitates easier coronary artery insertion and removal.

---

**Sof-Flo Shunt Features**

- **Beveled Ultra-Soft Tip**
  - Softest tip available minimizes trauma to coronary intima during insertion and removal
  - Asymmetric taper facilitates tip navigation for easier insertion

- **Obstruction-Free Flow Path**
  - Improved blood flow
  - No obstructions to induce turbulence

- **Large Atraumatic Sealing Surface**
  - Larger seal results in improved visualization
  - Reduces external crimping or arterial crushing

- **Flexible Shaft**
  - Provides ease of insertion and removal
CHASE MEDICAL Sof-Flo® SHUNTS
ARE EASILY INSERTED AND REMOVED, WITH MINIMAL TRAUMA.

The unique asymmetric Sof-Flo tip, flow-through design, and proprietary material provide atraumatic myocardial protection and maintain a bloodless field. The soft tip off-set geometry minimizes intimal trauma during insertion and removal. The unobstructive shaft allows blood to flow directly through the shaft reducing turbulence. The Sof-Flo shunts, with unique coloring, can further help prevent the back wall of the arteriotomy from being inadvertently included in the suture loop.¹

Step 1: Hold shunt in center with pick-ups. With second set of pick-ups, gently insert beveled tip.

Step 2: While still holding shunt in center, gently inset second beveled tip with pick-ups.

Step 3: With pick-ups gently push shunt into position.
